Item 2. Management's Discussion and Analysis of Financial Condition and Results of Operations

September 30, 2025 vs. December 31, 2024

The total assets of the Company increased by PHP 1,383.8 million or 42.7% from PHP 3,238.8 million as of December 31, 2024 to PHP 4,622.6 million as of September 30, 2025.

Total current assets increased by PHP 1,376.2 million or 50.9% from PHP 4,079.4 million as of December 31, 2024 to PHP 2,703.2 million as of September 30, 2025. Total current assets as of September 30, 2025 and December 31, 2024 were 88.2% and 83.5% of the total assets as of September 30, 2025 and December 31, 2024, respectively.

Cash and cash equivalents decreased by PHP 62.4 million or -73.7% from year-end PHP 84.7 million as of December 31, 2024 to PHP 22.3 million as of September 30, 2025 due to lower volume generated. Cash and cash equivalents as of September 30, 2025 and December 31, 2024 were 0.5% and 2.6% of the total assets as of September 30, 2025 and December 31, 2024, respectively.

Trade and other receivables-net increased by PHP 1,618.2 million or 67.4% from PHP 2,401.9 million as of December 31, 2024 to PHP 4,020.1 million as of September 30, 2025. Trade and other receivables-net consist of trade receivables from agents, advances to fulfillment agents, advances to trading agents, advances to related parties and other receivables. Trade and other receivables as of September 30, 2025 and December 31, 2024 were 87.0% and 74.2% of the total assets as of September 30, 2025 and December 31, 2024, respectively.

Financial assets at fair value through profit or loss (FVTPL) amounted to PHP 166.1 million at year-end 2024, PHP 160.8 million or -96.8% lower than the PHP 5.4 million recognized as of September 30, 2025. These assets consist of forward and swap contracts mark-to-market value at period-end, and investments in equity securities held for trading by subsidiary Power Star Asia Group Limited (PSAGL). Equity securities declined by PHP 160.8 million or -96.8% from PHP 166.1 million as of December 31, 2024 to PHP 5.4 million as of September 30, 2025. Financial assets at FVTPL as of September 30, 2025 and December 31, 2024 were 0.1% and 5.1% of the total assets as of September 30, 2025 and December 31, 2024, respectively.

Financial assets at FVOCI amounted to PHP 1.2 million as of September 30, 2025 compared to 24.1 million as of December 31, 2024. Under FVOCI are the debt securities investment of Power Star Asia Group. Financial assets at FVOCI as of September 30, 2025 and December 31, 2024 were 0.03% and 0.7% of the total assets as of September 30, 2025 and December 31, 2024, respectively.

Prepayments and other current assets increased by PHP 4.1 million or 15.7% from PHP 26.4 million as of December 31, 2024 to PHP 30.5 million as of September 30, 2025. Prepayments and other current assets consist of prepaid expenses, receivable from the Bureau of Internal Revenue, advances to suppliers and contractors, supplies inventory, creditable withholding taxes and other current assets. Increase was relative due to the receivable from BIR and its related VAT Input for the First half of 2025. Prepayments and other current assets as of September 30, 2025 and December 31, 2024 were 0.7% and 0.8% of the total assets as of September 30, 2025 and December 31, 2024, respectively.

Total non-current assets increased by PHP 7.5 million or 1.4% from PHP 535.6 million as of December 31, 2024 to PHP 543.2 million as of September 30, 2025. The disclosure has been amended to reflect the revision of indirect shareholdings of Mr. Ben C. Tiu.

According to the Press Release by the Bangko Sentral ng Pilipinas, Cash remittances from Overseas Filipinos (OFs) sustained their upward trend, rising by 3.2 percent from US\$2.89 billion in August 2024 to US\$2.98 billion in August 2025, supported by stronger inflows from both land-based and sea-based workers.

Remittances from land-based OFs reached US\$2.35 billion, marking a 3.0-percent increase year on year, while contributions from sea-based OFs totaled US\$626 million, up by 3.8 percent.

For the January–August period, total cash remittances grew by 3.1 percent, climbing from US\$22.22 billion in 2024 to US\$22.91 billion in 2025.

In the Philippines, the United States stayed to be the number one source of remittance from January to August 2025. Second and third are Singapore and Saudi Arabia, respectively.

Personal remittances—which cover cash sent through banks and informal channels, as well as in-kind transfers—rose in tandem with cash remittances, expanding by 3.2 percent from US\$3.20 billion in August 2024 to US\$3.31 billion in August 2025.

From January to August, personal remittances likewise increased by 3.1 percent, reaching US\$25.51 billion compared to US\$24.74 billion during the same period in 2024.

COMPLIANCE WITH SEC LETTER
DATED OCTOBER 29, 2008**

The information required by SEC letter dated October 29, 2008 can be found in the following pages:

a. Financial risk exposures of I-Remit, Inc. ("Company")

Please refer to pages 45 to 46.

b. Disclosure on the financial instrument of the Company

(1) Description of the financial instruments of the Company and the classification and measurements applied for each.

Please refer to pages 39 to 40.

(2) Amount of Company's investments in foreign securities.

Not applicable as the Company has no investments in foreign securities.

(3) Significant judgments made in classifying a particular financial instrument in the fair value hierarchy.

Please refer to page 44.

(4) Explanation of how risk is incorporated and considered in the valuation of assets or liabilities.

Please refer to pages 45 to 46.

(5) Comparison of the fair values as of date of the recent interim financial report and as of date of the preceding interim period, and the amount of gain/loss recognized for each of the said periods.

Not applicable.

(6) Criteria used to determine whether the market for a financial instrument is active or inactive as defined under PAS 39-Financial Instruments.

Please refer to pages 40.

The significant judgments made in classifying a particular financial instrument in the fair value hierarchy, in both the Parent Company's and the Group's Consolidated interim financial statements are consistent with the most recent annual financial statements as of December 31, 2024.

On the comparison of the fair values as of date of the recent interim financial report and as of date of the preceding interim period, and the amount of gain/loss recognized for each of the said periods:

In accordance with PFRS 9, Financial Assets at Fair Value through Profit and Loss (FVTPL) are marked to market as profit and loss. As such, these form part of unrealized gains and losses.

Financial Assets at Fair Value through Other Comprehensive Income (FVOCI) are marked to market against capital funds and reflected as Accumulated Other Comprehensive Income (Loss). The movements of these accounts are recognized as Other Comprehensive Income (OCI)– Unrealized Fair Value Gain/Loss Reserve for the Consolidated books

Summary of Significant Accounting Policies

PFRS 9 replaces PAS 39, Financial Instruments: Recognition and Measurement for annual periods beginning on or after January 1, 2018, bringing together all three aspects of the accounting for financial instruments: classification and measurement; impairment; and hedge accounting.

The Group has applied PFRS 9 with the initial application date of January 1, 2018, and is consistently applied in the interim financial statements.

At initial recognition, financial assets are classified and measured at amortized cost, fair value through other comprehensive income (FVOCI), and fair value through profit or loss (FVTPL).

The classification of financial assets at initial recognition depends on the financial asset's contractual cash flow characteristics and the Group's business model for managing them. With the exception of trade receivables that do not contain a significant financing component or for which the Group has applied the practical expedient, the Group initially measures a financial asset at its fair value plus, in the case of a financial asset not at fair value through profit or loss, transaction costs.

In order for a financial asset to be classified and measured at amortized cost or fair value through OCI, it needs to give rise to cash flows that are SPPI on the principal amount outstanding. This assessment is referred to as the SPPI test and is performed at an instrument level. The Group's business model for managing financial assets refers to how it manages its financial assets in order to generate cash flows. The business model determines whether cash flows will result from collecting contractual cash flows, selling the financial assets, or both.

The classification is based on two criteria: the Group's business model for managing the assets; and whether the instruments' contractual cash flows represent 'solely payments of principal and interest' (SPPI) on the principal amount outstanding.

The assessment of whether contractual cash flows on debt instruments are solely comprised of principal and interest was made based on the facts and circumstances as at the initial recognition of the assets. The classification and measurement requirements of PFRS 9 did not result in changes in the carrying value of the Group's financial instruments.

The Group continues measuring at fair value all financial assets previously held at fair value under PAS 39.

In accordance with the financial asset classification principle, the financial assets are classified and measured as follows:

- Amortized cost for assets held within a business model whose objective is to hold financial assets in order to collect the contractual cash flows that represent solely payments of principal and interest (SPPI) on the principal outstanding.
- Fair value through other comprehensive income (FVOCI) which meets the SPPI criterion and is held in a business model whose objective is achieved by both collecting contractual cash flows and selling the financial assets; and
- FVTPL for all other financial assets.

The following are the classification of the Group's financial assets:

- Cash and cash equivalents, trade and other receivables, short-term investments, refundable deposits and advances to a supplier are hold-to-collect contractual cash flows and give rise to cash flows representing solely payments of principal and interest, are classified and measured as financial assets at amortized cost.
- Quoted debt instruments are classified and measured as financial assets at FVOCI with recycling. The Group expects not only to hold the assets to collect contractual cash flows, but also to sell a significant amount on a relatively frequent basis.
- Listed Equity investments are classified and measured as FVTPL.

Subsequent Measurement

Financial assets at amortized cost are subsequently measured using the effective interest rate ("EIR") method and are subject to impairment. Gains and losses are recognized in profit or loss when the asset is derecognized, modified or impaired.

For debt instruments at FVOCI, interest income, foreign exchange revaluation and impairment losses or reversals are recognized in the consolidated statement of profit or loss and computed in the same manner as for financial assets measured at amortized cost. The remaining fair value changes are recognized in OCI. Upon de-recognition, the cumulative fair value change recognized in OCI is recycled to profit or loss. The Group's debt instruments at FVOCI include investments in government securities and investments in corporate bonds.

Financial Liabilities and Equity Instruments

Financial Liabilities

Initial Recognition and Measurement

An entity shall recognize a financial liability in its statements of financial position when, and only when, the entity becomes party to the contractual provisions of the instrument.

Except for trade payables that do not have a significant financing component, at initial recognition, an entity shall measure a financial liability at its fair value minus, in the case of financial liability not at fair value through profit or loss, transaction costs that are directly attributable to the acquisition or issue of the liability.

Classification

An entity shall classify all financial liabilities as subsequently measured at amortized, except for:

- financial liabilities at fair value through profit or loss;
- financial liabilities that arise when a transfer of a financial asset does not qualify for de-recognition or when the continuing involvement approach applies;
- financial guarantee contracts;
- commitments to provide a loan at a below-market interest rate;
- contingent consideration recognized by an acquirer in a business combination.

The Group's financial liabilities include financial liabilities at FVTPL, beneficiaries and other payables (excluding payable to government agencies) and loans payable. The Group has financial liabilities measured at fair value through profit or loss in the recent year and in the current interim period.

Loans Payable

The Group borrows funds from banks for the fulfilment of its remittance obligations. Borrowings are short term and are classified as current liabilities. PAS 23 defines borrowing costs as interest and other costs than an entity incurs in connection with the borrowing of funds.

The cost of borrowing funds which include interest, documentary stamp tax and other directly related charges are recognized as costs of servicing the fulfilment of remittance obligations of the Group. Whereas the cost of borrowing funds intended for the acquisition, construction or production of a qualifying asset form part of the cost of the acquired asset, if any. Qualifying asset is defined as an asset which necessarily takes a substantial period of time to get ready for its intended use or sale.

The Group follows the standard on PFRS 9 on the measurement and recognition of other financial liabilities including loans payable at amortized cost using the effective interest method.

Equity Instruments

An equity instrument is any contract that evidences a residual interest in the assets of an entity after deducting all of its liabilities. Equity instruments issued by the Group are recognized at the proceeds received, net of direct issue costs.

Ordinary shares are classified as equity. Incremental costs directly attributable to the issuance of new shares are shown in equity as a deduction from the proceeds, net of tax. The cost of acquiring the Group's own shares are shown as a deduction from equity until the shares are cancelled or reissued. When such shares are subsequently sold or reissued, any consideration

received, net of directly attributable incremental transaction costs and the related income tax effects, is included in equity.

De-recognition of Financial Assets and Liabilities

Financial asset

A financial asset (or, where applicable a part of a financial asset or part of a group of similar financial assets) is derecognized when:

- the rights to receive cash flows from the asset have expired;
- the Group retains the right to receive cash flows from the asset, but has assumed an obligation to pay them in full without material delay to a third part under a 'pass through' arrangement; or
- the Group has transferred its rights to receive cash flows from the asset and either (a) has transferred substantially all the risks and rewards of the asset, or (b) has neither transferred nor retained substantially all the risks and rewards of the asset, but has transferred control of the asset.

When the Group has transferred its rights to receive cash flows from an asset or has entered into a pass-through arrangement, and has neither transferred nor retained substantially all the risks and rewards of the asset nor transferred control of the asset, the asset is recognized to the extent of the Group's continuing involvement in the asset. Continuing involvement that takes the form of a guarantee over the transferred asset is measured at the lower of the original carrying amount of the asset and the maximum amount of consideration that the Group could be required to repay.

Financial liability

A financial liability is derecognized when the obligation under the liability is discharged, cancelled or has expired. When an existing financial liability is replaced by another from the same lender on substantially different terms, or the terms of an existing liability are substantially modified, such an exchange or modification is treated as a de-recognition of the original liability and the recognition of a new liability, and the difference in the respective carrying amounts is recognized in the consolidated statement of income.

Offsetting Financial Instruments

Financial assets and financial liabilities are offset and the net amount is reported in the consolidated balance sheet if, and only if, there is a currently enforceable legal right to offset the recognized amounts and there is an intention to settle on a net basis, or to realize the assets and settle the liabilities simultaneously.

Impairment of Financial Assets

The impairment policy applied in the interim financial statements is consistent with the PFRS 9 adopted by the Group in January 1, 2020 as disclosed in its recent audited financial statements for the year ended December 31, 2024. The Group's accounting for impairment losses for financial assets under PFRS 9 replaced PAS 39 incurred losses approach with a forward-looking expected credit loss ("ECL") approach. PFRS 9 requires the Group to recognize allowance for ECLs for all debt instruments not held at fair value through profit or loss. The adoption of PFRS 9 does not have a significant impact on Group's trade and other receivables and other financial assets.

The Group measures expected losses of a financial instrument in a way that reflects:

- An unbiased and probability-weighted amount that is determined by evaluating a range of possible outcomes;
- The time value of money; and
- Reasonable and supportable assumption that is available without undue cost or effort at the reporting date about past events, current conditions and forecast of future economic conditions.

The Group adopts a general approach in accounting for impairment.

- General Approach

At each reporting date, the Group shall measure the loss allowance for a financial instrument at an amount equal to the lifetime expected credit losses if the credit risk on that financial instrument has increased significantly since initial recognition. However, if the credit risk has not increased significantly, an entity shall measure the loss allowance equal to 12-month expected credit losses.

To assess whether the credit risk on a financial instrument has increased significantly or not, the Group shall compare the risk of default occurring as at the reporting date with the risk of a default occurring as at the date of initial recognition and consider reasonable and supportable information, that is available without undue cost or effort, that is indicative of significant increases in credit risk since initial recognition.

The Group may assume that the credit risk on a financial instrument has not increased significantly since initial recognition if the financial instrument is determined to have low credit risk at the reporting date.

If the Group has measured the loss allowance at an amount equal to lifetime expected credit losses in the previous reporting period, but determines at the current reporting date, that the credit quality improves (i.e. there is no longer a significant increase in credit risk since initial recognition), then the Company shall measure the loss allowance at an amount equal to 12-month expected credit losses at the current reporting date.

The Group shall recognize in profit or loss, as an impairment gain or loss, the amount of expected credit losses (or reversal) that is required to adjust the loss allowance at the reporting date. Lifetime expected credit losses are generally expected to be recognized before a financial instrument becomes past due. Typically, credit risk increases before a borrower becomes past due or other lagging borrower-specific factors (for example, a modification or restructuring) are observed. Consequently, when reasonable and supportable information that is more forward-looking than past due information is available without undue cost or effort; it must be used to assess changes in credit risk.

The Group applied the general approach to cash and cash equivalents, trade and other receivables, financial assets at FVOCI, guaranteed investment certificates and receivable from BIR and refundable deposits presented under 'other non-current assets'.

Significant Accounting Judgments and Estimates

The preparation of the financial statements in compliance with PFRS requires the Group to make judgments and estimates that affect the reported amounts of assets, liabilities, income and expenses and disclosure of contingent assets and contingent liabilities. Future events may occur which will cause the assumptions used in arriving at the estimates to change. The effects of any change in estimates are reflected in the financial statements as they become reasonably determinable.

Judgments and estimates are continually evaluated and are based on historical experience and other factors, including expectations of future events that are believed to be reasonable under the circumstances.

Fair Value Measurement

The fair values of financial assets and financial liabilities are determined as follows:

- Due to short-term nature of cash and cash equivalents, trade and other receivables, GIC, beneficiaries and other payables (excluding payable to government agencies), and loans payable, their carrying amounts approximate their fair values.
- Refundable deposits are measured at amortized cost, which approximates its fair value.
- The financial assets at FVTPL are measured at quoted market price and quoted foreign currency exchange rates. The financial liabilities at FVTPL are measured using quoted foreign currency exchange rates.
- The financial assets at FVOCI (with recycling) are measured using quoted market rates.
- The fair values of other financial assets and financial liabilities (excluding derivative instruments) are determined in accordance with generally accepted pricing models based on discounted cash flow analysis using prices from observable current market transactions and dealer quotes for similar instruments.

Fair Value Hierarchy

The Group uses the following hierarchy for determining and disclosing the fair value of financial instruments by valuation technique:

Level 1: quoted prices in active markets for identical assets or liabilities;

Level 2: inputs other than quoted prices included in Level 1 that are observable for the asset or liability, either directly (as prices) or indirectly (derived from prices); and

Level 3: inputs that are not based on observable market data or unobservable inputs.

As of September 30, 2025 and December 31, 2024 the financial instruments carried at fair value only pertains to the Group's financial assets at FVTPL and FVOCI, which consist of investments in equity securities and debt instruments, respectively. The fair values of these equity and debt securities are based on quoted prices (Level 1). There were no transfers between Level 1 and Level 2 fair value measurements, and no transfers into and out of Level 3 fair value measurement in 2025 and 2024.

Financial Risk Management Objectives and Policies

The Group's principal financial instruments mainly comprise of short-term loans from banks. The main purpose of these financial instruments is to raise funds for the Group's fulfillment or delivery of remittance transactions to beneficiaries. The Group also has various other financial assets and liabilities such as cash and cash equivalents, accounts receivables, and accounts payable to beneficiaries, which arise directly from its remittance operations.

The main risks arising from the Group's financial instruments are credit risk, foreign currency risk, cash flow interest rate risk, fair value interest rate risk and liquidity risk. The BOD reviews and approves policies for managing each of these risks and these are summarized below:

Credit Risk

Credit risk is the risk of loss resulting from the failure of a borrower or counterparty to perform its obligations during the life of the transaction. This includes risk of non-payment by borrowers or issuers, failed settlement of transactions and default on contracts.

The nature of its business exposes the Group to potential risk from difficulties in recovering transaction money from foreign partners. Receivables from agents arise as a result of its remittance operations in various regions of the globe. In order to address this, the Group has maintained the following credit policies: (a) implement a contract that incorporates a bond and advance payment cover such that the full amount of the transaction will be credited to the Group prior to their delivery to the beneficiaries, which applies generally to all new agents of the Group and in certain cases to old agents; (b) all foreign offices and agents must settle their accounts within the agreed credit terms, otherwise, the fulfillment or delivery of their remittance transactions will be put on hold; (c) evaluation of individual potential partners and preferred associates' creditworthiness, as well as a close look into the other pertinent aspects of their partners' businesses which assures the Group of the financial soundness of their partner firms; and (d) receivable balances are monitored daily by the regional managers with the result that the Group's exposure to bad debts is not significant.

The Group classifies its neither past due nor impaired receivables as high grade. High grade financial assets includes instruments with credit ratings of excellent, strong, good, or satisfactory, wherein the borrower has a low probability of default and could withstand the normal business cycle.

The rest of the Group's financial assets, which include cash and cash equivalents, investments in equity and debt securities (also classified as High Grade), refundable deposits, are all classified as high grade. The Group transacts only to banks with investment grade credit rating. This information is supplied by independent rating agencies. The Group uses other publicly available information to monitor the financial status of the banks. The Company assesses the current and forecast information of the banking industry and the macro-economic factors such as GDP, interest rate, unemployment rate, inflation and USD/PHP foreign exchange rates.

The Group invests only in quoted debt and equity securities with very low credit risk. The Group's investments comprised solely of quoted securities that are graded as prime to upper medium grade by credit rating agencies and therefore, are considered to be low credit risk investments. The Group's exposure, and credit ratings of counterparties are regularly monitored, with the aggregate value of investments spread based on defined authorized

investments limits per geographic area, per industry sector, per currency, per duration, among others. Credit exposure is controlled by counterparty limits that are reviewed and approved by the risk management committee annually.

Foreign Currency Risk

Foreign currency risk is the risk to earnings or capital arising from changes in foreign exchange rates. It is the Group's policy that all daily foreign currencies, which arise as a result of its remittance transactions, must be traded daily with bank partners only at prevailing foreign exchange rates in the market. The daily closing foreign exchange rates shall be the guiding rate in providing wholesale rates and retail rates to foreign offices and agents, respectively. The trading proceeds will be used to pay out bank loans and other obligations of the Group.

Cash Flow Interest Rate Risk

Interest rate risk arises from the possibility that changes in interest rates will affect future cash flows of financial instruments.

As of September 30, 2025 and December 31, 2024, the Group's exposure to cash flow interest rate risk is minimal. The Group's policy is to manage its interest cost by entering only into fixed rate short-term loans from banks.

Fair Value Interest Rate Risk

Fair value interest rate risk is the risk that the fair value of a financial instrument will fluctuate due to changes in market interest rates.

The Group accounts for its debt investments at fair value. Thus, changes in the benchmark interest rate will cause changes in the fair value of quoted debt instruments.

There is no impact on the Group's equity other than those already affecting the profit or loss.

Equity Price Risk

Equity price risk is the risk to earnings or capital arising from changes in stock exchange indices relating to its quoted equity securities. The Group's exposure to equity price risk relates primarily to its investments in equity securities.

The Group's policy is to maintain the risk to an acceptable level. Movement of share price is monitored regularly to determine impact on its consolidated balance sheet.

Liquidity Risk

Liquidity or funding risk is the risk that an entity will encounter difficulty in raising funds to meet commitments associated with financial instruments.

The Group's objective is to maintain a balance between continuity of funding and flexibility through the use of short-term debts. In addition, the Group maintains credit facilities with local banks.
